

Deadline: May 10, 2021 (respective classes)

#### Assignment 5:

Design a video streaming application using either the *Spring framework* or *servlets*. The application will store a list of videos. A client will be eligible to do the following

- View the list of videos available at the server
- View detailed information about a particular video. Such as, the duration, the creator of the video, the file format etc.
- Play a particular video.

Give your comment on how you have implemented spring security and the underlying multimedia protocol stack that is working as part of the developed application.
